

So here's the Overview Plot analysis for the cases of each region in the philippines that been discovered where there are many victims of the virus.

..

## COVID 19 DATA ANALYSIS IN THE PHILIPPINES

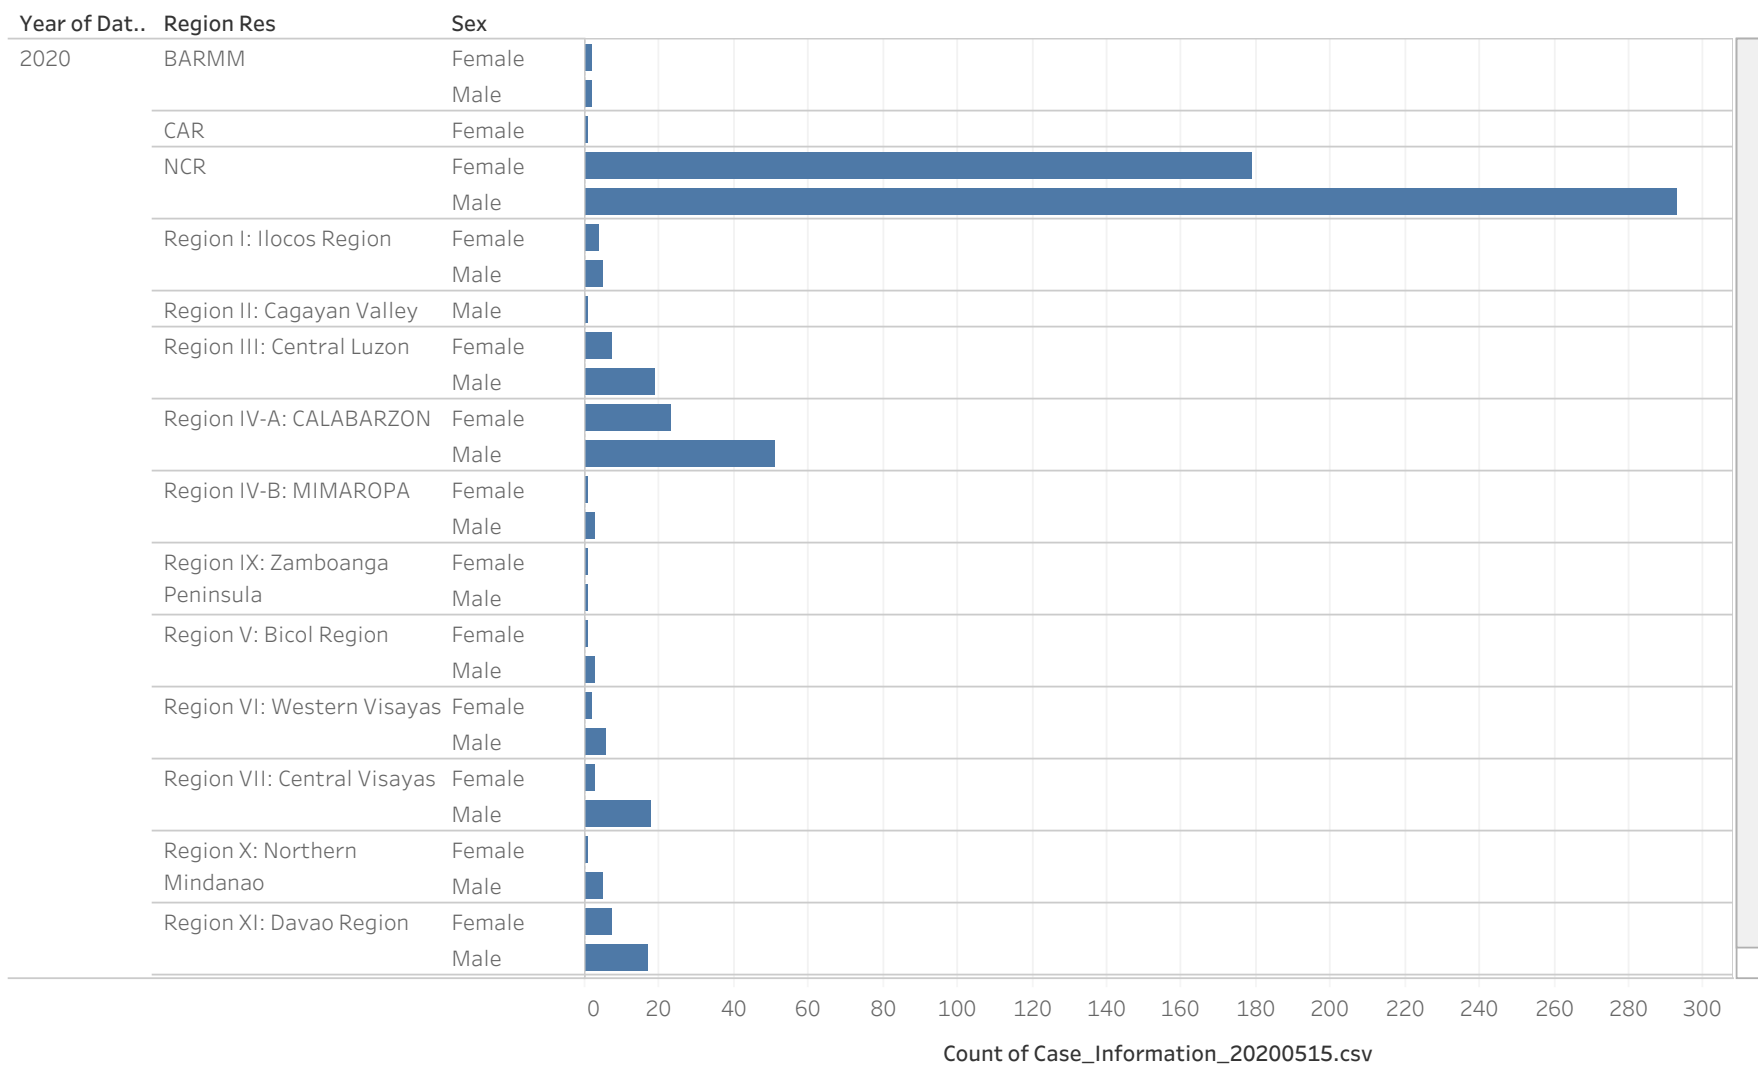

For this second analysis plot here the percentage of people which age are mostly get sick

You can see the big difference of both genders that are often get sick especially old males, which it has a numerous percentage.

This Virus has big impact especially for the health of every old people who has a weak resistance

Next here is that percentage of every region who are mostly getting a death rate because of the victim of the virus, base on this analysis the NCR again is leading that who has leading percentage of having numerous death rates here in the philippines , This is also sad because mostly Male are again the victims of numerous deaths

Lastly here are also the plot percentage of people who have recovered from the virus, each region here represents the counts of people, their gender and age that who are mostly been recovered. For the recorded having this kind of numbers of people that been recovered is a successful percentage every filipino especially for the doctors & scientist who are trying to save many people as they can. This numbers shows their success
