

COVID 19 DATA SET ANALYSIS REPORT IN THE PHILIPPINES

Catulay, Weslie Jee

Year of Cases of having symptoms

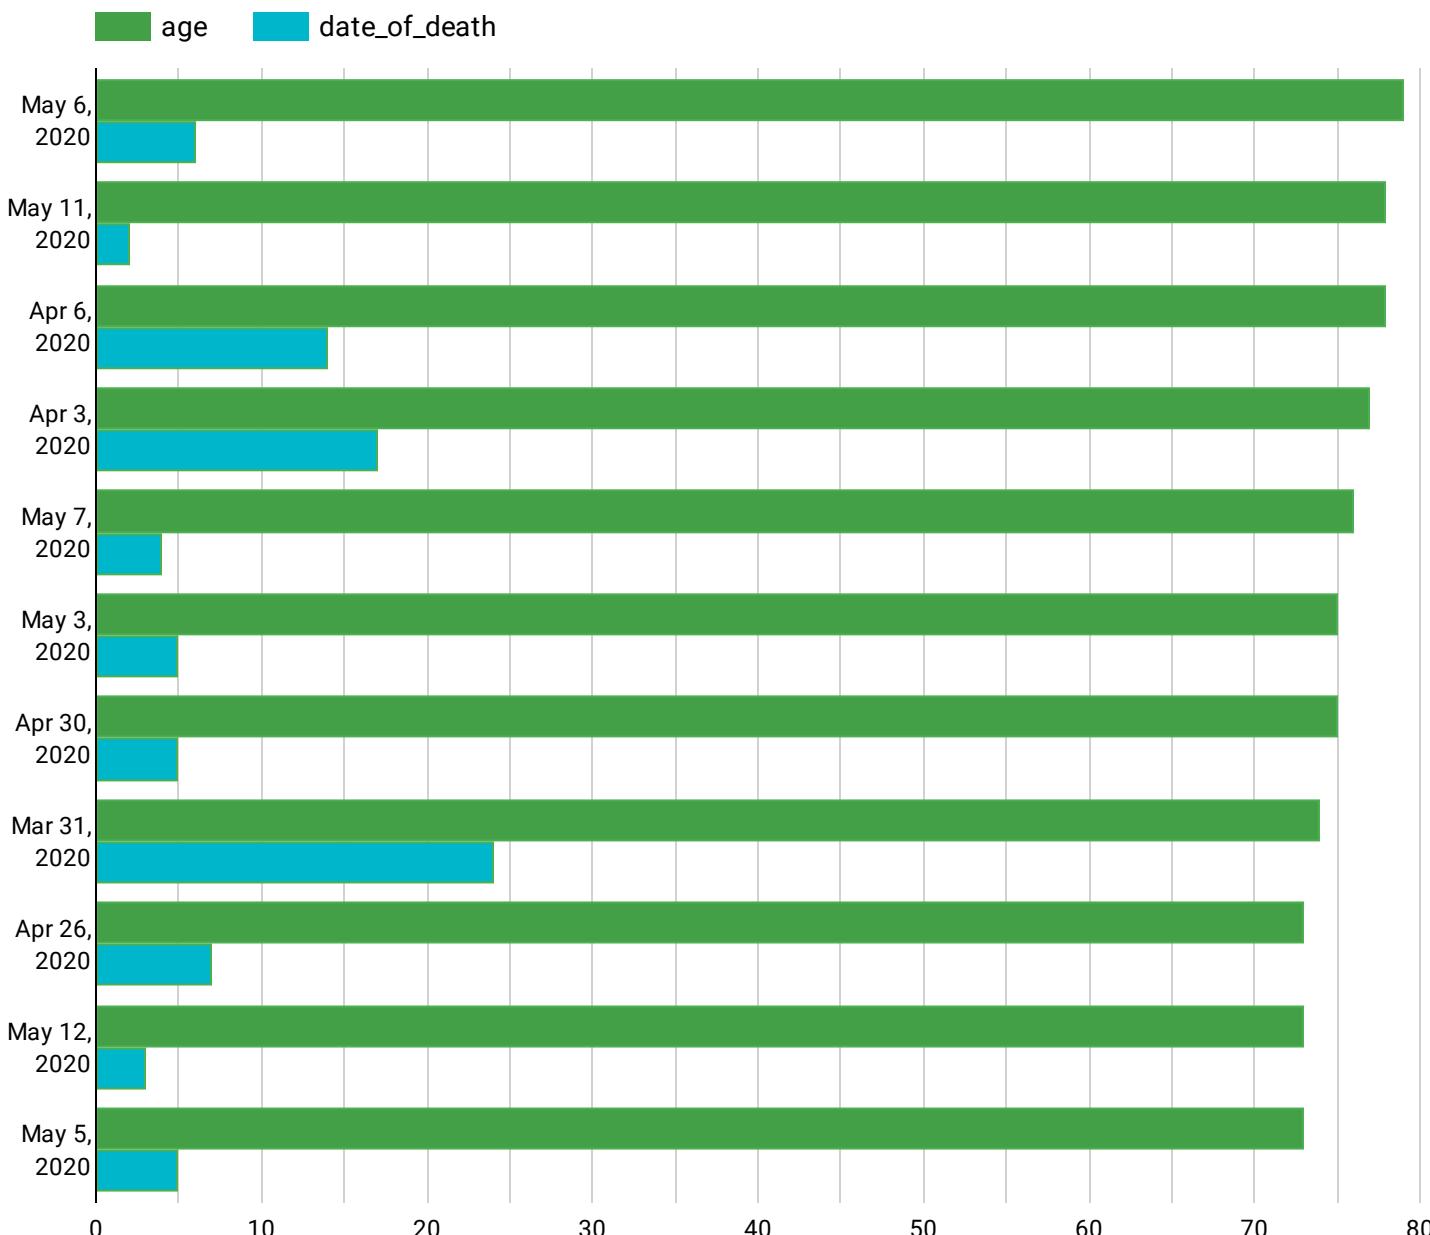

- Mar 2020
- Apr 2020
- Apr 2020
- Mar 2020
- May 2020
- Apr 2020
- May 2020
- May 2020
- Others

We can see on this data chart line is that during first month of January 2020, we still don't have a lot of case of people who has symptoms of Corona Virus

But during the 2nd week of march until march 31 is that the first we receive a record 538 people who has symptoms.

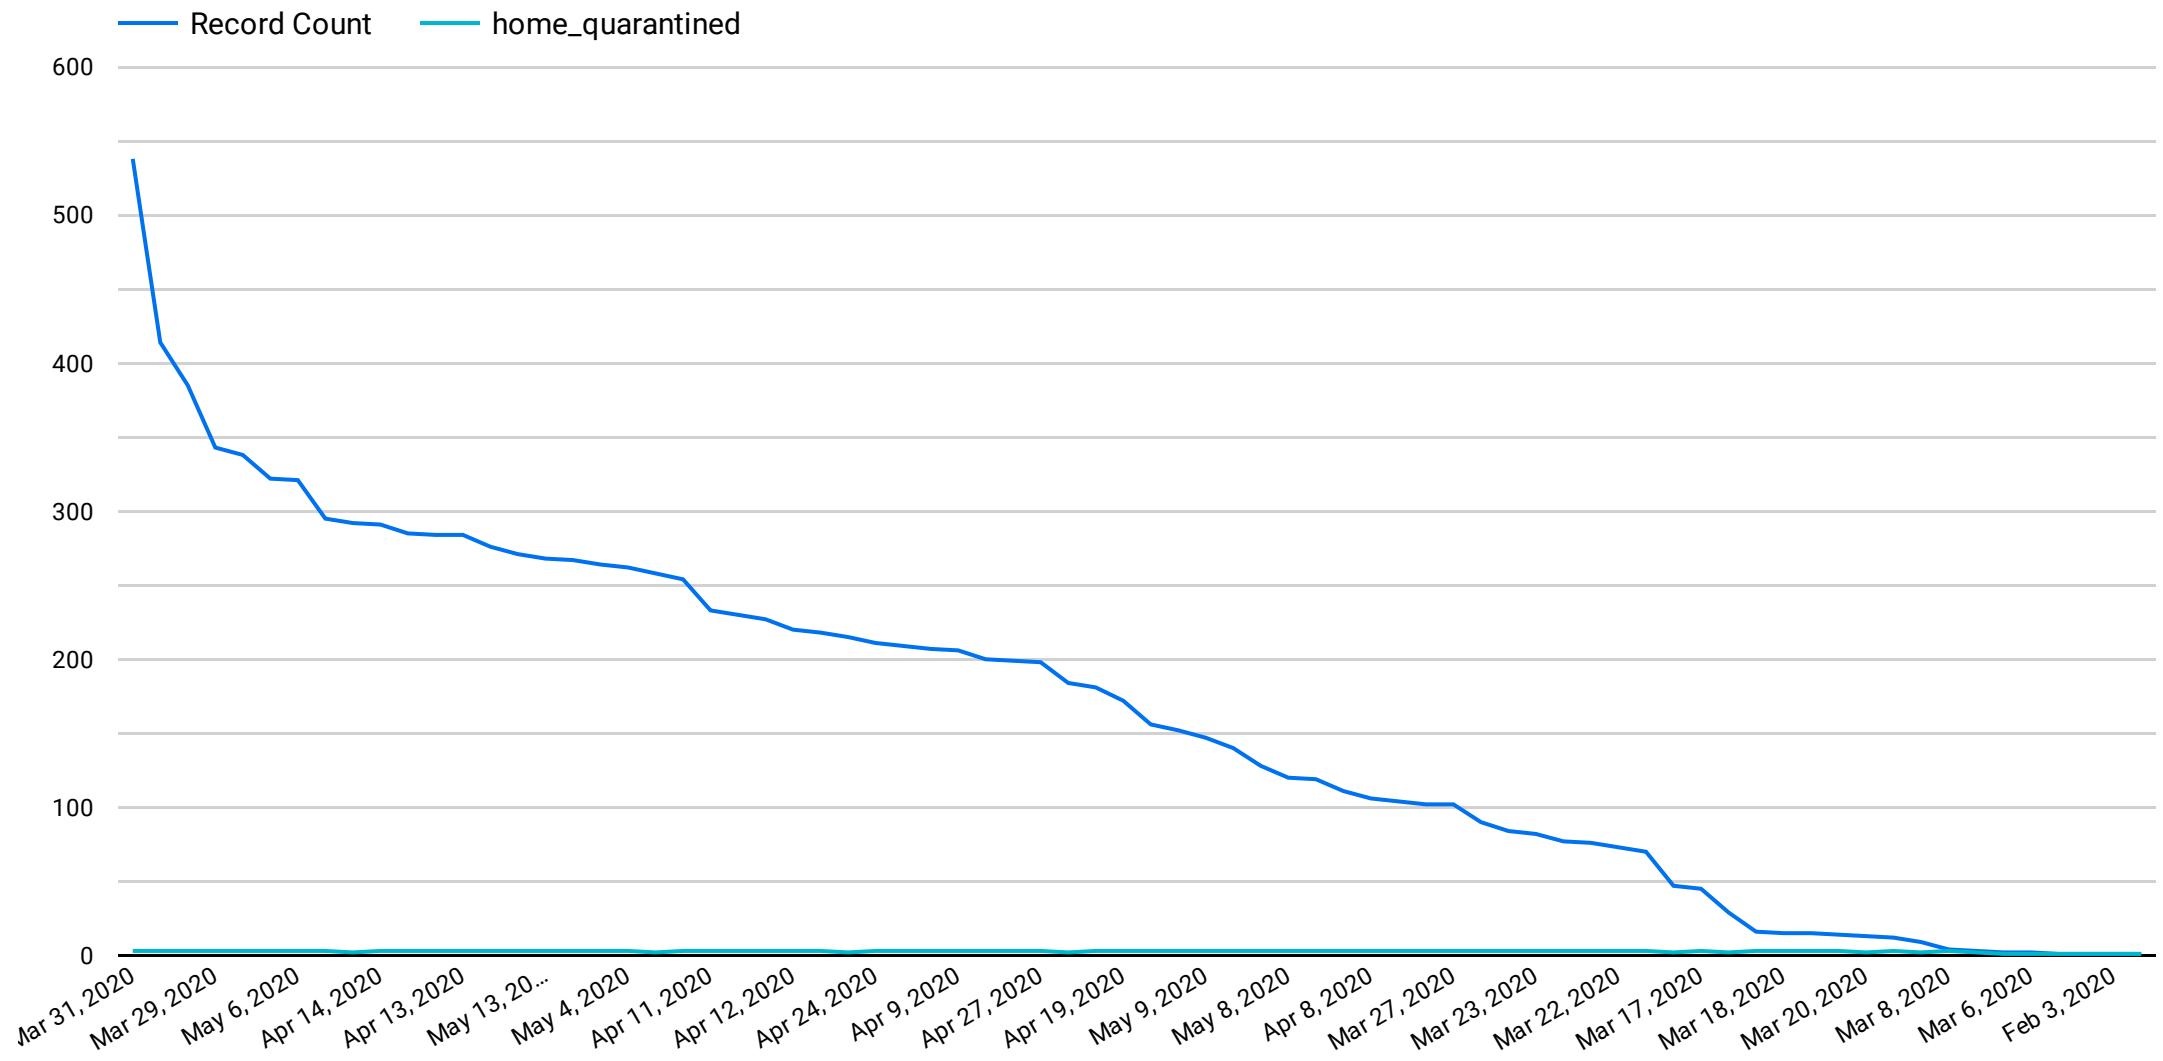

Age of people who are mostly targeted by the Virus

Just by looking at this chart we can already identify who are the most targeted of the Covid 19 base on the results

To differ these graph chart record

Below we can see the age of every people who are being targeted by the virus and it's on side we can see that date count of people by their age each day or month

Lastly here are the record counts for the people that are used to be in Home Quarantine due to it's exponential growth who are getting virus but due to it's quarantine you can every month it reduces the people who are used to be in quarantine

Always follow the health guidelines and government rules because sometimes simple rules are the only thing that will keep us safe.

Thank You !!!
